

Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

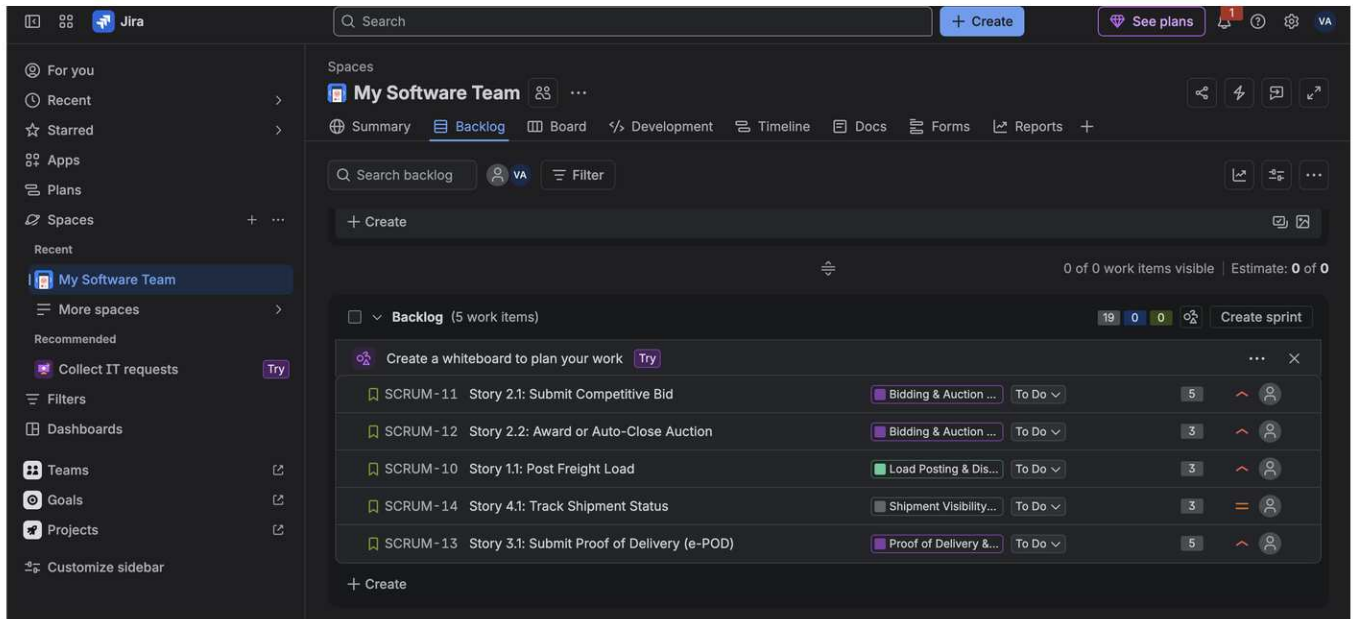

Problem Statement #28 - Inter-City Freight Load Matching Marketplace

Name: Varshini A | SRN: PES1UG24CS517

EPICs and User Stories

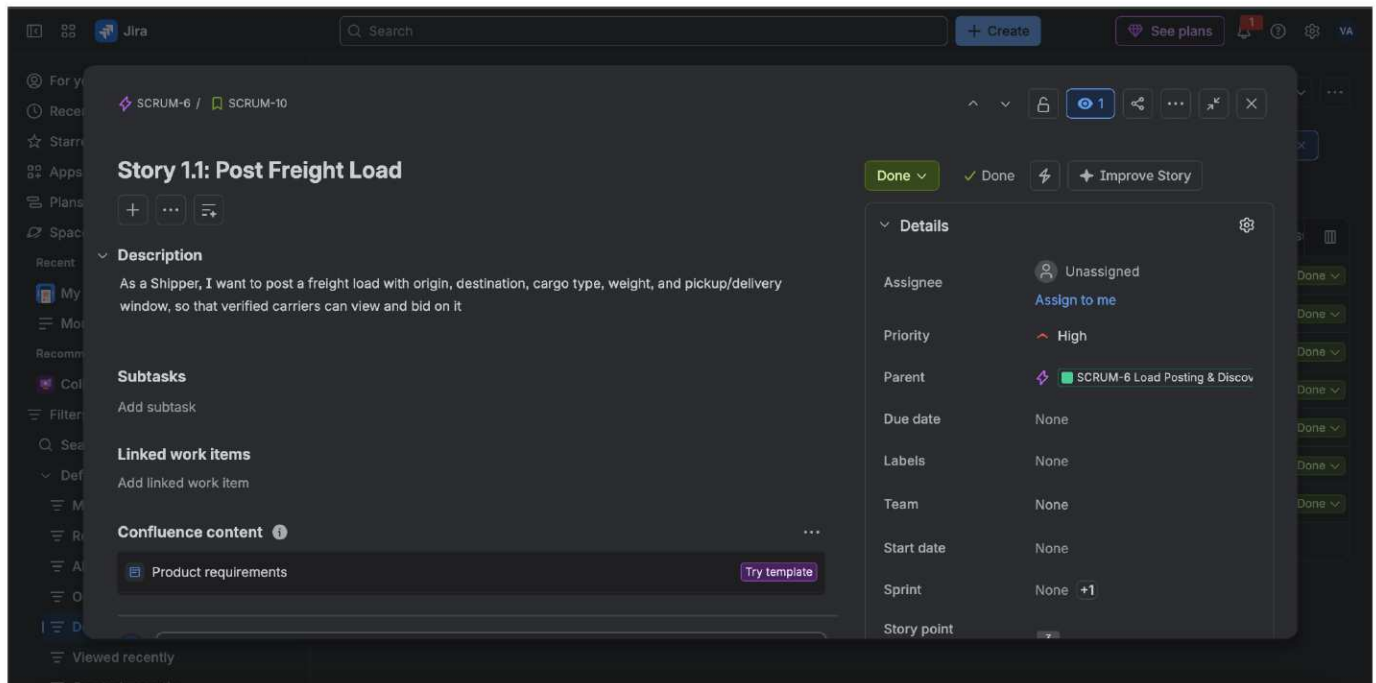

Epic	User Story	Story Points
Load Posting & Discovery	Story 1.1: Post Freight Load	3
Bidding & Auction Management	Story 2.1: Submit Competitive Bid; Story 2.2: Award or Auto-Close Auction	5, 3
Proof of Delivery & Payment Release	Story 3.1: Submit Proof of Delivery (e-POD)	5
Shipment Visibility & Platform Reliability	Story 4.1: Track Shipment Status	3

Jira backlog with all five stories and their story-point estimates

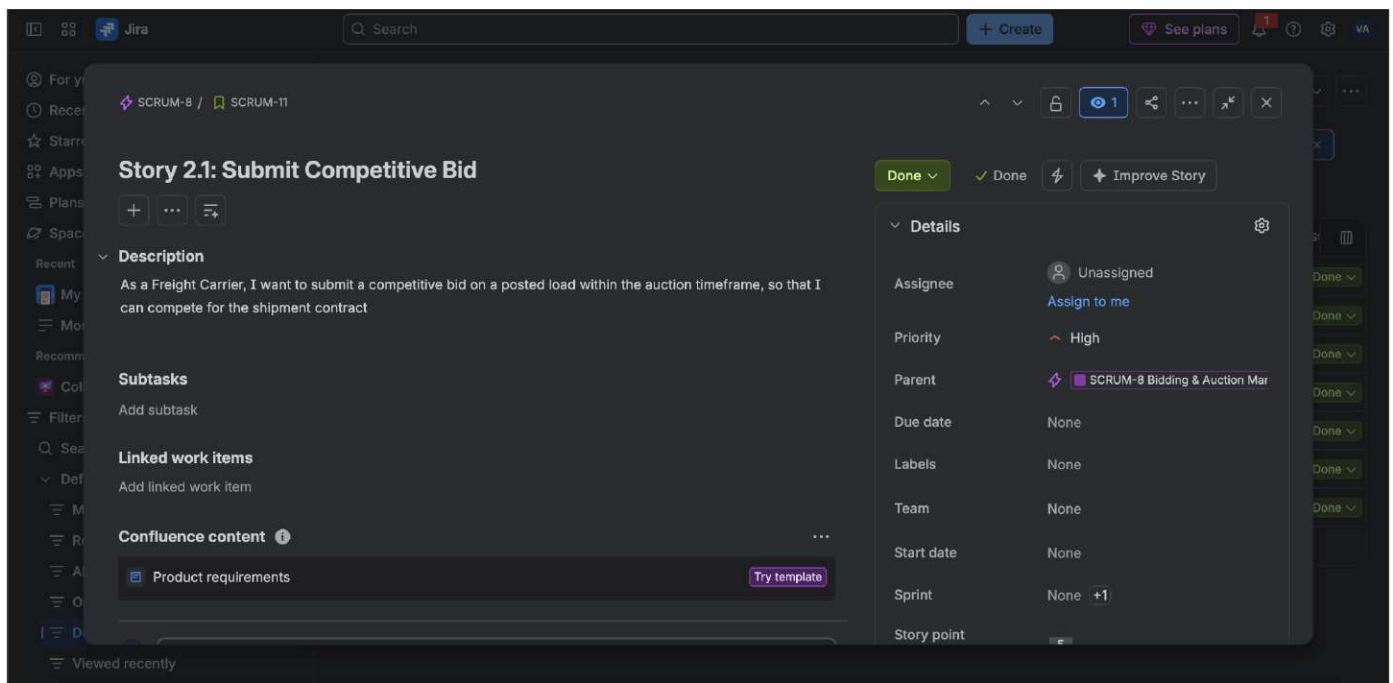

User Story Details and Priorities

Jira story descriptions showing the user-story format, priority, and linked Epic.

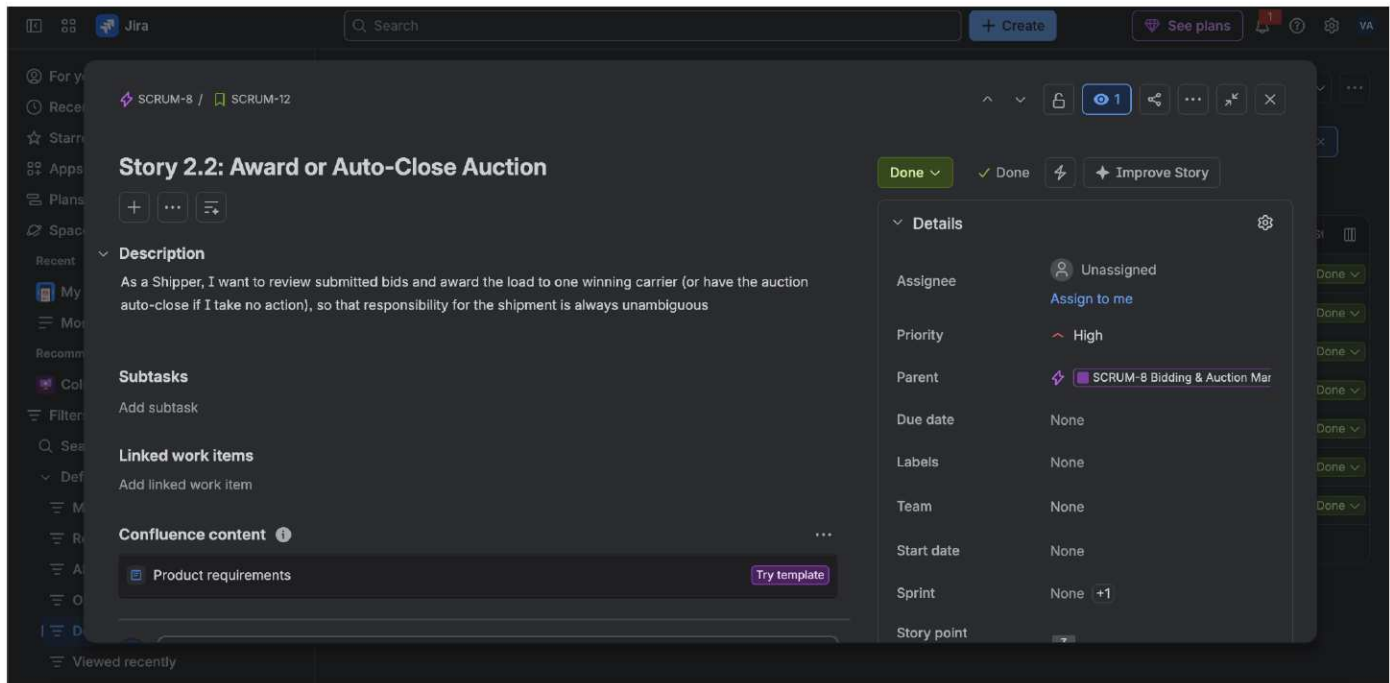

Story 1.1: Post Freight Load - description, High priority, and Epic parent

Story 2.1: Submit Competitive Bid - description, High priority, and Epic parent

User Story Details and Priorities

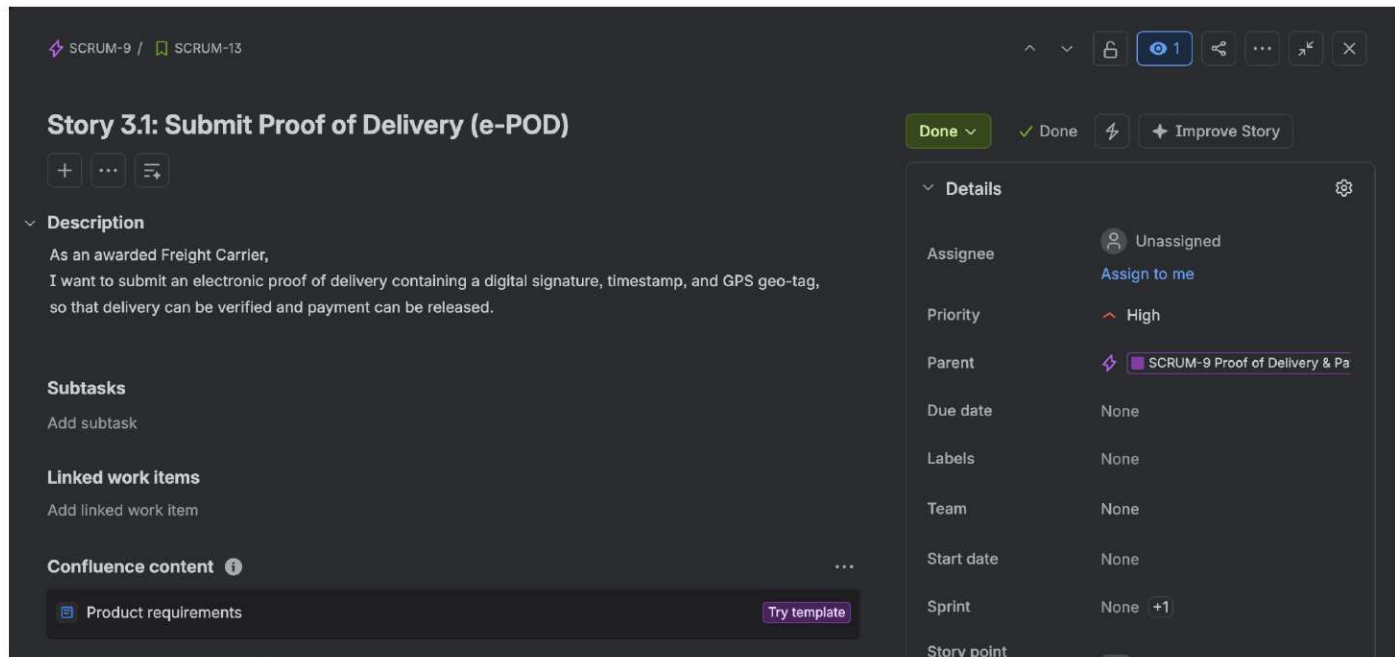

Jira story descriptions showing the user-story format, priority, and linked Epic.

The screenshot shows the Jira interface for a story titled "Story 2.2: Award or Auto-Close Auction". The story is linked to the "SCRUM-8" epic. The description reads: "As a Shipper, I want to review submitted bids and award the load to one winning carrier (or have the auction auto-close if I take no action), so that responsibility for the shipment is always unambiguous". The story is assigned to "Unassigned" with a "High" priority. The parent epic is "SCRUM-8 Bidding & Auction Mar". The story is currently in the "Done" state. The details panel on the right shows the following information:

Field	Value
Assignee	Unassigned
Priority	High
Parent	SCRUM-8 Bidding & Auction Mar
Due date	None
Labels	None
Team	None
Start date	None
Sprint	None +1

Story 2.2: Award or Auto-Close Auction - description, High priority, and Epic parent

The screenshot shows the Jira interface for a story titled "Story 3.1: Submit Proof of Delivery (e-POD)". The story is linked to the "SCRUM-9" epic. The description reads: "As an awarded Freight Carrier, I want to submit an electronic proof of delivery containing a digital signature, timestamp, and GPS geo-tag, so that delivery can be verified and payment can be released." The story is assigned to "Unassigned" with a "High" priority. The parent epic is "SCRUM-9 Proof of Delivery & Pa". The story is currently in the "Done" state. The details panel on the right shows the following information:

Field	Value
Assignee	Unassigned
Priority	High
Parent	SCRUM-9 Proof of Delivery & Pa
Due date	None
Labels	None
Team	None
Start date	None
Sprint	None +1

SCRUM-7 / SCRUM-14

Story 4.1: Track Shipment Status

+

...

→

Description

As a Shipper or Freight Carrier,
I want to view the current status of loads I am associated with,
so that I can monitor shipment progress.

Reflection Questions

1. Did your estimations reflect the actual effort?

Mostly yes. I gave 5 points to stories with more steps and checks, and 3 points to the simpler ones. Since this was a Jira simulation, the points represent relative effort rather than actual coding time.

2. Was your backlog well-prioritized?

Yes. I kept load posting, bidding, and award/closure first because the later delivery steps depend on them. Shipment tracking was placed after the core flow.

3. How did your simulated sprint align with your plan?

It mostly matched the plan. Sprint 1 handled the main freight posting and auction flow, while Sprint 2 handled e-POD and shipment tracking. I moved the stories through the board as the simulation progressed.

4. What insights did the burndown chart give about your team's capacity?

The chart showed how much work was left after stories were completed. The drops are stepwise because Jira removes the full story points when a story is marked Done. Sprint 2 reached zero remaining points well before its planned end date, which suggests that the selected work was slightly under-scoped and there was capacity for some additional work. Overall, the workload was manageable for this simulation.
